

# GlobalSign OneClickSSL

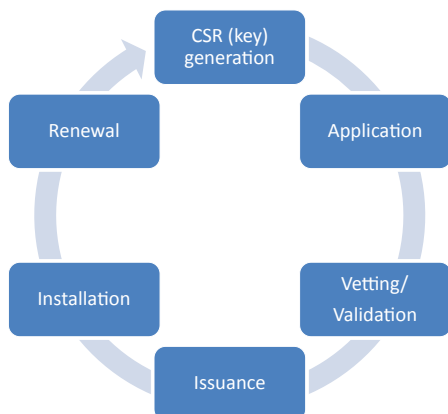

SSL active in seconds via the OneClickSSL technology

Traditional processes for SSL security can be tedious. Completing the necessary steps, which entails creating and sending a CSR (Certificate Signing Request), receiving email communications from the SSL vendor and processing the necessary steps to install the SSL Certificate, requires patience and technical know-how.

With the introduction of OneClickSSL, SSL Certificate provisioning can be fully automated on IIS, Apache, Plesk and cPanel, making server security easily accessible to organizations of all sizes.

## Traditional methods

SSL Certificates are created following a lifecycle model which can be typically segmented into 6 stages. Managing traditional SSL deployments requires a good level of understanding of cryptographic keys and management principles and processes:

A poorly optimized lifecycle puts undue pressure on staff through increased levels of phone calls and emails to solve technical issues.

## Revolutionary automation

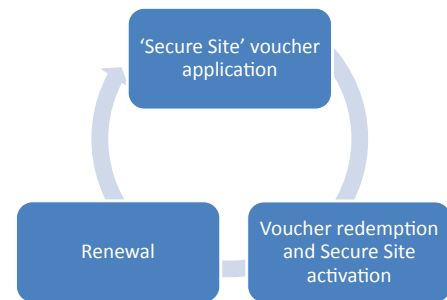

The revolutionary OneClickSSL mechanism automates the application, issuance and installation of SSL Certificates with the click of a button, offering huge efficiency.

OneClickSSL is based on multi-factor authentication techniques, hence providing the highest security levels, whilst also enabling administrators to manage the entire SSL lifecycle with practically zero training requirements on cryptography, key size, algorithm selection and revocation.

## 'Secure Site' vouchers

With OneClickSSL, customers simply acquire a Secure Site voucher for the product and validity period of their choice which they exchange for an SSL Certificate at a later stage, using one of the OneClickSSL plug-ins for IIS, Apache, cPanel or Parallels Plesk.

The redemption of the voucher launches the whole SSL provisioning process, as the plug-in will transparently create the CSR, validate the domain control, install the issued certificate and bind it to the appropriate website.

At 10-15 times quicker than the nearest competitive delivery mechanism and with zero human technical support costs, OneClickSSL allows hosting providers to focus on their core business and to accelerate profits through the extra revenues that SSL Certificates can provide.

## OneClickSSL solution benefits

- **Full automation** - from CSR generation to SSL installation
- **Instant security** - fully valid, trusted, and active SSL Certificate operational on the site within 45 seconds
- **Array of integration options** - plug-ins available for IIS, Apache, cPanel and Parallels Plesk
- **Accelerated profits** from reselling SSL as part of the GlobalSign Partner Program
- **Highest levels of security** - easy provisioning of SSL products issued by the trusted GlobalSign CA
